

Many different calenders have existed throughout the history of Caecilius, but the one almost universally accepted and used for most modern technology is the MC (modern calender) system. Much of this system has been being used as it is now for hundreds of years, though inconsistent year counts are what prompted the shift to a universal system. It has existed for barely 100 years, so any events dated before it are addressed as a negative year in the MC system.

In the MC, dates are most often written in YYYYMMDD format (this calender does not attempt to accurately represent dates from over 10 thousand years ago due to specific dating being impossible)

Years

Years are made up of 350 days.

There are 10 35 day months, each split into 5 7 day weeks.

Months

The month system is carried over from an ancient system, based off of the orbit of Caecilius around its sun and the shadows it casts on its moon. There are considered to be 10 months in the Caecilian year in the MC. These months are named after a mixture of things, such as ancient rulers, gods, and numbers in old languages, and long lost cultural traditions.

The months are:

1 March

2 April

3 May

4 June

5 July

6 August

7 September

8 October

9 November

10 December

Weeks and Days

Each month has 5 weeks (35 days)

The days of the week are named after the Norse pantheon, a carry over from the prevalence of that system over the past thousand years where that was the preferred region of Raenshire empire and other people around Faengtriolis.

Each week has days: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, and Sunday

Saturday and Sunday are considered a “weekend”, where many peoples schedules are different and often lighter.

During a Day

Each day is made of 24 hours, each being 60 minutes, each being 60 seconds. Divisions of seconds are represented metrically.

Midnight is considered 00:00:00

Seasons

The seasons on Caecilius differ based on hemisphere, though are fairly simple. Each season falls somewhat inconsistently into a 2-3 month interval. Seasons are not really considered important to dating or calenders any more.

Northern Hemisphere:

Spring: March-May

Summer: May-August

Autumn: August-November

Winter: November-March

Southern Hemisphere:

Spring: September-November

Summer: November-March

Autumn: March-May

Winter: May-August

Saint Galadus Campaign

The campaign begins on the 12th of August, 101.
